COREY KING

Software Engineer | C# and Unity | Generative AI and Agent Systems
Central Florida · cking@ckinggames.com
linkedin.com/in/coreyking24 · thecrimsoncompass.com

SUMMARY

Software engineer with 7+ years in C# and Unity building real-time systems, now building retrieval-grounded AI agents on Azure. Previously technical lead on Virtual Hangar, a Unity 2024 Industry Award winner whose USAF customers report $7M+ in annual savings. Works AI-first with Codex, Copilot, and Claude Code, and helped shape Mass Virtual's AI adoption strategy.

CORE STRENGTHS

C# and Unity Development
Real-Time Multi-User Systems
Editor Tools and Content Pipelines
Technical Leadership and Mentoring
Generative AI, RAG and Agents (Azure)
AI-Assisted Engineering (Codex, Copilot)
Data Pipelines, ETL and Reporting
CI/CD, Git, Jira and Agile

EXPERIENCE

Crimson Compass — Remote
Independent Software Engineer — Jun 2026 - Present

- Built a Guild Wars 2 AI assistant in C# (.NET 10, Microsoft Agent Framework) that answers progression questions by combining live account data from the GW2 API with RAG over 8,300+ achievements, using Azure OpenAI in Microsoft Foundry and Azure AI Search.
- Designed the pipeline to ingest, embed, and index with hybrid keyword and vector search; cut embeddings to 256 dimensions with int8 quantization to fit free-tier quotas.
- Agent tools do progress math in code and keep API keys server-side; secured with keyless Azure RBAC, user secrets, and Cloudflare Zero Trust. Blazor UI, SQLite cache.
- Built an AI trip desk tool as a Claude artifact for a luxury travel agency, with custom skills so the advisor runs her own AI workflows; phase 1 was showcased to industry peers.
- Writing My AI Journey, a blog on practical AI adoption, at thecrimsoncompass.com.

Mass Virtual — Orlando, FL
Senior Software Engineer (Technical Lead) — Jan 2025 - Jun 2026
Software Engineer III — Feb 2024 - Jan 2025
Software Engineer II — Mar 2023 - Feb 2024

- Senior engineer on Virtual Hangar, an award-winning Unity training platform for AR, VR, tablet, and desktop. USAF customers report $7M+ in annual savings and 55% shorter class hours. Promoted from Software Engineer II to Senior in under 2 years.

UNITY AND REAL-TIME SYSTEMS

- Developed aircraft training simulations for multiple U.S. military airframes, turning customer requirements and documentation into procedure-based training modules.
- Enabled solo and group learning on 7 platforms (Meta Quest, HoloLens, Android, iOS, desktop) by architecting a real-time multi-user Classroom system in Unity with network sync.
- Cut content setup from weeks to 30 seconds by building a JSON-driven Unity scene importer; also owned UI configuration and startup initialization.
- Secured data to backend services by building the client side of an encrypted REST and gRPC pipeline; aligned the web team on data ownership.

Data, Automation and AI

- Gave the COO, Product Director, and team managers a live view of estimated vs. actual vs. contracted hours by replacing manual KPI formulas with a Power BI platform linking Jira, Costpoint ERP, and contract data, built in one month with AI-assisted development.
- Used OpenAI Codex and GitHub Copilot daily for C#, Power Query, and scripting; advised leadership on AI tool selection, costs, and rollout by role.

Leadership and Delivery

- Kept leadership, business development, UI/UX, and partner teams aligned as engineering point of contact, turning customer and contract requirements into scope.
- Resolved production issues and shipped hotfixes as one of a few engineers who knew the full system, with hands-on debugging and performance profiling.
- Delivered biweekly releases through sprint planning and CI/CD (Jenkins, TeamCity), reviewed code, helped lead the team's Jira adoption, mentored 4 engineers, and interviewed 9+ candidates, including for the team manager role.

Vertex Solutions (subcontractor, AFSOC) Hurlburt Field, FL
Software Specialist / Programmer Jan 2020 - Mar 2023

- Built training simulation software for USAF special operations programs.
- Gave nontechnical users self-service access to data by designing databases and Power Apps tools, and automated SharePoint workflows with Power Automate.
- Defined requirements with USAF stakeholders and cross-company teams, bridging operational needs and technical execution.

Additional: Co-Owner, Click and Slay Studios (2021 - 2026): strategy, client relations, and business operations; shipped a product on Steam · QA Tester, Deep Silver Volition (2019 - 2020)

SKILLS

AI and LLMs:	Azure OpenAI, Azure AI Search, Agent Framework, RAG, tool calling, Codex, Copilot, Claude Code, MCP
Languages:	C# (Expert), .NET 10, SQL, JavaScript, PowerShell, AI-assisted Python
Data:	SQL (SQLite, PostgreSQL), MongoDB, database design, Power BI, Power Query ETL
Integration & Cloud:	REST APIs, gRPC, JSON, Azure (Foundry, AI Search, RBAC), Blazor, Cloudflare Zero Trust, AWS (S3)
Real-Time:	Unity (Expert), multi-user networking, state sync, profiling, XR
Delivery:	Git, Perforce, CI/CD (Jenkins, TeamCity), code review, Jira, Agile / Scrum
Leadership:	Mentoring, hiring interviews, sprint planning, stakeholder communication

CERTIFICATIONS AND TRAINING

Anthropic Claude Academy 2026
Claude Code in Action, Claude Platform 101, Claude Code 101, AI Capabilities and Limitations

Microsoft Learn · learn.microsoft.com/en-us/users/coreyking-0001 2026
Develop generative AI apps in Azure (learning path)

AWARDS

Unity 2024 Industry Award, Best Training Application | Virtual Hangar, Mass Virtual 2024

EDUCATION

Columbia College Chicago Chicago, IL
Bachelor of Arts in Game Development 2019
